EDUCATION

Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Computer Science

May 2027

- **Concentrations:** Intelligence & Info Internetworks
- **Related Coursework:** Data Structures, Analysis of Algorithms, Objects & Design, Computer Organization & Networking, Systems and Networks, Database Systems, Intro to AI, Machine Learning, Robotics & Perception
- **Awards:** Tech Promise Scholar, The Gates Foundation Scholar, Hispanic Scholarship Fund Scholar, MLT CP2027

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C++, C#, Swift, Objective-C, JavaScript, TypeScript, SQL, HTML/CSS
Frameworks & Development Tools: Git, Docker, Firebase, Postman, VS Code, Heroku, Jupyter, IPFS, MetaMask, Pandas, NumPy, React, Remix, Node.js, Android Studio, PyTorch, Ant Design, .NET

EXPERIENCE

Solo Pulse | *Software Engineer Intern*

May 2026 - Aug 2026

- Spearheading embedded software for advanced radar systems across drone and ground vehicle platforms, driving hardware bring-up and cross-functional data distribution

The Home Depot | *Software Engineer Intern*

Jan 2026 - May 2026

- Implemented a PyTorch-based ML self-checkout shrink detection model connecting real-time transaction risk scoring and intervention recommendations to loss prevention workflows, contributing to \$7.66M in annual savings

Georgia Institute of Technology AI Department | *AI Development Intern*

Aug 2025 - Dec 2025

- Deployed a Python/Flask shipment delay analysis platform for UPS, ingesting 1,000+ scan records via SQL queries to surface route bottlenecks, missed handoffs, and risk delivery exceptions, reducing manual review time by 30%
- Launched a full-stack React/Django customer issue triage tool for Cox Enterprises, consolidating 250+ support tickets into dashboards for recurring network issues, escalation patterns, and operational decision insights

Peachtree Immediate Care Platform Engineering | *Software Engineer Intern*

Jan 2025 - Aug 2025

- Automated scikit-learn anomaly detection pipelines and FastAPI backend automation in Python to detect system failures and streamline diagnostics, reducing manual operational workload by 40% across 5+ urgent care clinics
- Delivered and maintained full-stack React/PostgreSQL internal tools and REST APIs supporting clinical workflows across 5+ urgent care locations, improving reliability and staff efficiency

PROJECTS

Pfizer AI Document Intelligence | *Python, LlamaIndex, Tesseract, PaddleOCR, Mistral, Phi-2*

- Constructed OCR pipelines (Tesseract, PaddleOCR) and a LlamaIndex RAG system to extract and classify pharmaceutical vendor data, achieving 93% OCR accuracy and delivering a technical report on model trade-offs

Behavior Cloning Ant Robot | *Python, PyTorch, NumPy, MuJoCo, OpenAI Gym*

- Trained a PyTorch behavioral cloning policy for a MuJoCo Ant robot using expert demonstrations and feedforward controllers, implementing NumPy replay buffer sampling and MLP policy updates via OpenAI Gym, reaching 85% episode completion rate

MicroTorch | *Python, PyTorch, NumPy*

- Engineered a lightweight Python/NumPy neural network framework from scratch with custom linear layers, ReLU/sigmoid activations, MSE/cross-entropy loss, and backpropagation; validated correctness on XOR regression

LEADERSHIP & PROFESSIONAL DEVELOPMENT

Google Latinx Student Leadership Summit | *Student Leader*

Apr 2024

- Selected as 1 of 50 student leaders (3% acceptance) for a leadership and professional development program featuring fireside chats, leadership sessions, skill-building and workshops

Student Organization for Latinos in Computing (SOLC) | *Co-Founder & President*

Nov 2023 - Present

- Led partnerships with Google, Pinterest, and others to host workshops and panels for 100+ Latinx students in tech

Other Activities: Bloomberg Tech Summit, Capital One Hispanic Tech Summit, J.P. Morgan Code For Good
